GODWIN CHIEMERIE OJUKWU

FULL-STACK SOFTWARE DEVELOPER

Herne, Germany | +49 1575 5339577 | emeriego@gmail.com | LinkedIn: ojukwugc

PROFESSIONAL PROFILE

Full-stack software developer experienced in building and maintaining web applications with React, Next.js, TypeScript and JavaScript, including API integrations, performance improvements and reusable components. Currently independently building ComBridge, an AI-assisted, end-to-end communication bridge using Java 21, Spring Boot, PostgreSQL and React Native to address a real communication barrier. Brings additional applied experience in machine learning, predictive modelling and data analytics; motivated by practical problem-solving, code quality and learning new backend technologies.

TECHNICAL SKILLS

Frontend: React, Next.js, React Native, TypeScript, JavaScript, HTML5, CSS3/Sass, Tailwind CSS, Bootstrap

Backend: Java 21, Spring Boot (current project), Node.js, Express.js, Python, Django

APIs & data: REST APIs, third-party/AI integrations, PostgreSQL, SQL, Firebase, Swagger

Engineering tools: Git, Docker, Jenkins, code reviews, reusable component libraries

AI & analytics: Speech-to-text and LLM integration, machine learning, predictive modelling, clustering, Streamlit

SELECTED SOFTWARE & AI PROJECTS

ComBridge — AI-Assisted End-to-End Communication Bridge | Ongoing

Stack: Java 21, Spring Boot, PostgreSQL, React Native, TypeScript, Deepgram, Gemini AI, REST APIs

- Building an end-to-end communication assistant that helps users understand spoken German and respond in real time, addressing a personal language barrier through practical software.
- Developing the Java/Spring Boot backend for audio processing, conversation and turn management, context-aware translation and generation of multiple suggested replies.
- Integrating Deepgram speech recognition and Gemini AI with a React Native mobile interface; implementing REST endpoints and automated tests.
- Core conversational flows are working; continuing to improve latency, reliability and the voice interaction experience.

Water-Pump Functionality Prediction | Machine Learning

Stack: Python, machine learning, Streamlit

- Built and compared models to predict water-pump functionality in Tanzania; applied RFECV feature selection, with Random Forest performing best among tested approaches.

Retail Customer Segmentation | Data Analytics

Stack: Python, clustering, data analysis

- Analysed retail customer data using clustering to identify meaningful customer groups and behavioural patterns.
- Additional projects in software development, machine learning and data analytics.

PROFESSIONAL EXPERIENCE

Application Developer / Systems Analyst | ICT Directorate, University of Calabar, Nigeria

Feb 2017 – Jan 2025

- Developed and maintained more than five university web applications using React and Next.js.
- Improved frontend performance through architecture reviews, state-management improvements and refactoring.
- Supported API integrations and data-fetching improvements; worked with TypeScript, React Native, Python/Django, Docker and Swagger.

Frontend Software Developer | Intplus Technology LLC, Lagos, Nigeria

May 2023 – Jan 2025

- Developed web applications and a JavaScript payment SDK delivered through a Node.js server/CDN for integration into client applications.
- Integrated third-party APIs and services; reviewed code, mentored new team members and published a reusable component library via GitHub Packages.

Graphic Design / IT Support | Sarki Digital Impressions Ltd, Abuja, Nigeria

Apr 2016 – Feb 2017

- Created brand assets and reports; used feedback and data to guide design decisions and supported IT infrastructure and backups.

EDUCATION & TRAINING

Certificate, Software Engineering — ALX Africa and Holberton | Jul 2024

B.Sc., Computer Science — University of Abuja | Oct 2011

OPEN-SOURCE CONTRIBUTION

HNG ExpressJS Boilerplate | Feb 2024 – May 2024 — Contributed to an open-source Express.js boilerplate for structured web application development.
